## The Mineral Industry of Colorado

## This chapter has been prepared under a Memorandum of Understanding between the U.S. Bureau of Mines, U.S. Department of the Interior, and the Colorado Geological Survey for collecting information on all nonfuel minerals.

Colorado remained 25th in the ranking of the 50 States in total nonfuel mineral value ${ }^{1}$ in 1994, according to the U.S. Bureau of Mines. The estimated value for 1994 was $\$ 440$ million, a $10 \%$ increase over that of 1993 . This followed nearly a $4 \%$ increase in 1993 over that of 1992. The State accounted for more than $1 \%$ of the U.S. total. A little more than two-thirds of the State's nonfuel mineral value came from industrial minerals, especially construction sand and gravel, portland cement, and crushed stone. Most of the remaining one-third resulted from gold, molybdenum, and zinc, in descending order of value. Most of the State's increased value resulted from gold, which climbed $45 \%$; molybdenum, up $13 \%$; and construction sand and gravel, up $11 \%$ from that of 1993. Compared with 1993, the following increased in value: construction sand and gravel, portland cement, gold, crushed stone, molybdenum, zinc, lead, industrial sand and gravel, masonry cement, gypsum, dimension stone, and kaolin clays. Decreases occurred in silver, grade-A helium, lime, peat, and gemstones.

In estimated mineral production for 1994, Colorado remained second in molybdenum, fifth in lead, and sixth in zinc. The State also dropped from 7th to 9th of the 13 U.S.
gold-producing States. Colorado continued to produce a small portion of the Nation's grade-A helium, but dropped from fourth to fifth of five producing States.
According to the Colorado Geological Survey (CGS), diamond exploration continued in the State line district of Larimer County. A 14.2-carat gem diamond was recovered at the Kelsey Lake kimberlite and bulk mineral sampling continued at the Sloan prospect. The Pikes Peak Mining Co. began mining at the Cresson Gold Mine in the Cripple Creek district in late 1994. Annual gold production from this new open pit mine was expected to be about 3,700 kilograms ( 120,000 troy ounces). Nearly 2,300 kilograms (73,000 ounces) of gold and about 600 kilograms (19,000 ounces) of silver were produced at Battle Mountain Gold's San Luis Gold Mine in 1994. With improvements in the economies of a number of the world's nations, the demand and the price paid for molybdenum increased. According to CGS, this, in part, spurred increases in molybdenum production at Cyprus-Amax Minerals Co.'s Henderson Mine. Molybdenum production at the Henderson Mine increased more than $8 \%$ compared with that of 1993 from nearly 10,900 metric tons in 1993 to about 11,800 tons in 1994. The demand for high-quality, low-sulfur coal
