(Data in metric tons of tin content unless otherwise noted)
Domestic Production and Use: Tin has not been mined or smelted in the United States since 1993 and 1989, respectively. Twenty-five firms accounted for about $90 \%$ of the primary tin consumed domestically in 2018. The major uses for tin in the United States were tinplate, $21 \%$; chemicals, $17 \%$; solder, $14 \%$; alloys, $10 \%$; babbitt, bronze and brass, and tinning, 11\%; and other, 27\%. Based on the average Platts Metals Week New York dealer price for tin, the estimated value of imported refined tin was $\$ 703$ million, and the estimated value of tin recovered from old scrap domestically was $\$ 213$ million.

Recycling: About 11,000 tons of tin from old and new scrap was estimated to have been recycled in 2018. Of this, about 10,000 tons was recovered from old scrap at 2 detinning plants and about 75 secondary nonferrous metalprocessing plants, accounting for $22 \%$ of apparent consumption. This decrease was attributed to a decrease in leadbase scrap.

Import Sources (2014-17): Indonesia, 23\%; Malaysia, 23\%; Peru, 22\%; Bolivia, 17\%; and other, 15\%.

Events, Trends, and Issues: Apparent consumption of tin in the United States was estimated to have increased slightly in 2018 compared with consumption in 2017. Indonesia was the primary supplier of tin to the United States, and the estimated amount of tin recycled in 2018 decreased slightly from that in 2017. Estimated average tin prices for the first 10 months in 2018 were 945 and 923 cents per pound for the New York dealer price and London Metal Exchange price, respectively-a slight increase from both of the average prices in 2017.The monthly average New York dealer tin price in 2018 peaked in February at 1,004 cents per pound, then steadily decreased through September to a monthly average price of 882 cents per pound, before recovering slightly to a monthly average price of 889 cents per pound in October.

In May 2018, the U.S. Department of the Interior, in coordination with other executive branch agencies, published a list of 35 critical minerals ( 83 FR 23295), including tin. This list was developed to serve as an initial focus, pursuant to Executive Order 13817, "A Federal Strategy to Ensure Secure and Reliable Supplies of Critical Minerals" (82 FR 60835).

World Mine Production and Reserves: Reserves for Australia were revised based on new information from Government sources.

|  | Mine production |  | Reserves $^{\mathbf{6}}$ |
| :--- | ---: | ---: | ---: |
|  | $\underline{\mathbf{2 0 1 7}}$ | $\underline{\mathbf{2 0 1 8}}$ |  |
| United States | $-\overline{7}$ | $-\mathbf{-}$ | 7370,000 |
| Australia | 7,200 | 7,000 | 400,000 |
| Bolivia | 18,500 | 18,000 | 700,000 |
| Brazil | 18,000 | 18,000 | 110,000 |
| Burma | 47,000 | 45,000 | $1,100,000$ |
| China | 93,000 | 90,000 | 150,000 |
| Congo (Kinshasa) | 9,500 | 9,000 | 800,000 |

| Malaysia | 3,810 | 4,000 | NA |
| Nigeria | 5,960 | 6,000 | 110,000 |
| Peru | 17,800 | 18,000 | 350,000 |
| Russia | 1,300 | 1,300 | NA |
| Rwanda | 2,860 | 2,900 | 170,000 |
| Thailand | 100 | 100 | 11,000 |
| Vietnam | 4,560 | 5,000 | 180,000 |
| Other countries | 200 | 300 | $4,700,000$ |

World Resources: Identified resources of tin in the United States, primarily in Alaska, were insignificant compared with those of the rest of the world. World resources, principally in western Africa, southeastern Asia, Australia, Bolivia, Brazil, Indonesia, and Russia, are extensive and, if developed, could sustain recent annual production rates well into the future.

Substitutes: Aluminum, glass, paper, plastic, or tin-free steel substitute for tin content in cans and containers. Other materials that substitute for tin are epoxy resins for solder; aluminum alloys, alternative copper-base alloys, and plastics for bronze; plastics for bearing metals that contain tin; and compounds of lead and sodium for some tin chemicals.
