MANUFACTURED ABRASIVES IN THE SECOND QUARTER 2022

The U.S. Geological Survey (USGS) collects quarterly data on manufactured abrasives through its survey of producers. Manufactured abrasives included in this report are metallic abrasives, fused aluminum oxide, and silicon carbide. Where indicated, data from the United States and Canada are combined to avoid disclosing proprietary information. Except where noted, the quantities cited in this report are in metric units. All unit value calculations in this report are based on unrounded data.

Metallic Abrasives

During the second quarter of 2022, an estimated 43,100 metric tons (t) of steel shot and grit valued at an estimated \$41.8 million was produced, and an estimated 46,600 t valued at an estimated \$46.7 million was shipped in the United States. This was compared with an estimated 43,000 t valued at \$38 million produced and an estimated 46,000 t valued at \$43 million shipped during the second quarter of 2021. At least one company produced shot and grit from reclaimed material. Production and shipments of other types of metallic shot and grit (primarily cut wire shot) were each estimated to be 1,000 t valued at \$3 million, compared with production and shipments of 1,000 t valued at \$3 million and \$4 million, respectively in the second quarter of 2021. Total second quarter 2022 production of metallic abrasives was 44,100 t valued at \$44.8 million, for an average unit value of \$1,020 per ton. Total second quarter 2022 shipments of metallic abrasives were 47,600 t valued at \$49.7 million, for an average unit value of \$1,040 per ton (table 1).

Imports of all types of metallic abrasives during the second quarter of 2022 were 5,350 t valued at \$12.6 million, for an average unit value of \$2,360 per ton (table 2).

Exports of all types of metallic abrasives during the second quarter of 2022 were 5,520 t valued at \$9.86 million, for an average unit value of \$1,790 per ton (table 2).

Fused Aluminum Oxide

Combined production of regular-grade crude fused aluminum oxide in the United States and Canada during the second quarter of 2022 was estimated to be 5,000 t with an estimated value of \$800,000, which has been essentially unchanged for several years owing to production figures being rounded to the nearest 5,000 t to avoid disclosing proprietary data (table 1).

Imports of crude fused aluminum oxide during the second quarter of 2022 were 32,100 t valued at \$26.4 million, for an average unit value of \$824 per ton. Imports of ground and refined fused aluminum oxide for the same period were 18,700 t valued at \$26.3 million, for an average unit value of \$1,410 per ton (table 2).

Exports of crude fused aluminum oxide for the second quarter of 2022 were 4,440 t valued at \$14.5 million, for an average unit value of \$3,280 per ton (table 2).

Silicon Carbide

Total production of abrasive-grade silicon carbide in the United States and Canada during the second quarter of 2022 was estimated to be 10,000 t with an estimated value of \$7.4 million, which has been essentially unchanged in quantity and value for several years owing to production figures being rounded to the nearest 5,000 t to avoid disclosing proprietary data (table 1).

Imports of crude silicon carbide during the second quarter of 2022 were 31,600 t valued at \$33.4 million, for an average unit value of \$1,060 per ton. Imports of ground and refined silicon carbide for the same period were 10,600 t valued at \$35.3 million, for an average unit value of \$3,340 per ton (table 2).

Exports of crude silicon carbide during the second quarter of 2022 were 1,130 t with a value of \$1.60 million, for an average unit value of \$1,410 per ton. Exports of ground and

refined silicon carbide for the same period were 2,360 t valued at \$6.65 million, for an average unit value of \$2,820 per ton (table 2).
